This is very useful when planning a lesson. A you can create some questions to use as examples, and then scale the number of questions to create a task at home. Questions about tasks will be completely new, but follow exactly from the lesson a and you won't need to redesign the questions. Export questions as bitmap images and paste them into your favorite word processing software. Questions created with our products can be added to the assignments already created with other programs. Or you can refresh old assignments by replacing old questions with new ones. All questions are available for export. Any question you create may be switched between Answer and Multiple Choice. Multiple choice questions come with smart and potentially misleading choices. Some are based on common mistakes that students make, while others are only random but close to the correct answer. Check the number of choices each question has, two to five. Merge two or more tasks into one. Easily create quizzes, tests and reviews by merging unit's assignments and then resizing the total to an appropriate length. The questions will be new, while following exactly what you taught. The diagrams are all drawn accurately, unless the answer is given away. If an angle A is indicated as 30A°, then in fact A ~ 30A°. If the sides of a triangle are labeled 3, 4 and 5, then its lengths are truly in a ratio of 3:4:5. Seeing accurate diagrams helps students gain an intuitive understanding of angles and measurements. When printing a task, choose how to report the answers: On an answer sheet On an answer sheet with only the dimensions In context (next to or atinside the question) No answer sheet Integrate your lessons with of high quality and graphic paper of any size. Seeing accurate diagrams helps students gain an intuitive understanding of angles and measurements. When you print an assignment, you choose how the answers are reported: On an answer sheet On an answer sheet with just the odds In context (next to or within the question) No answer sheet Supplement your lessons with high-quality graphs and graph paper of any size. Each graph can have zero to two functions graphed on it. Graphs can be of any logical and physical size. You can also tile graphs across the page to maximize your paper use. Enter your own directions to create new types of problems. Shown on the left was a standard order of operations question that has been modified to be more analytical. You can alter the directions on any question type. From time to time, you will need to enter your own question. That's what custom questions are for. They can be either free response or multiple-choice and can contain math formatted text (equations, expressions, etc). Most automatically-generated questions can be modified manually. If there is a choice you don't like, you can change it. If you wish a question was slightly different, you can change it. Print assignments on any sized paper that your printer supports. If you decide to print an assignment on legal-sized paper, no problem. The questions will automatically be repositioned for you--no cutting and pasting the assignment back together just to use a different paper size. You also have control over the margins, page numbering, and paper orientation. orientation.
